SKY SHELF™ A/V ON-WALL SHELVING INTEGRATES WIRE MANAGEMENT WITH STYLE

LAS VEGAS, NEVADA- 2010 International CES, January 7-10, South Hall Booth # 21816 – Sky Shelf™, a new line of on-wall audio/video shelving systems by Cambre Products, combines the functionality of storage with the convenience of wire management in a clean modern appearance.

As the trend for wall mounting flat panel televisions gains popularity so does the need for mounting the coordinating components. The innovative slimline design of the Sky Shelf system allows for A/V components to be beautifully displayed and organized on the wall, eliminating the need for bulky floor furniture. Shelves are offered in a single width (17" w x 16" d) to support up to 25 lbs or a double width (35" w x 16" d) to support up to 50 lbs. A combination of single and double wide shelves can be used together to create the desired spacing and support needed to accommodate components in a custom configuration.

The opaque black tempered glass shelves have an understated elegance to effortlessly blend with any environment. Shelves can be visually linked together with the provided Wire Wraps™, a flexible rubber wire cover system that snaps together to conceal hanging wires and provide a finished appearance.

A new double-sided wood version of Sky Shelf is launching at CES 2010 and offers a reversible option of either a maple or black finish to coordinate with décor. Both the glass and wood lines give a visually clean floating appearance to the supported components and have a unique bracket design which allows for easy installation into wood or metal studs, concrete or masonry.
