WALL CUBE™ ADDS REVERSIBLE WOOD FINISHES TO ON-WALL STORAGE LINE

Stylish solution for mounting A/V electronics

LAS VEGAS, NEVADA- 2010 International CES, January 7-10, South Hall Booth # 21816 – Wall Cube™, a stylish solution by Cambre Products for mounting electronic components to the wall, now offers reversible wood finishes to coordinate with any décor.

The functional design of the Wall Cube allows for seamless integration with today's flat panel televisions while safely supporting electronics. A/V components are sleekly displayed and organized on the wall, eliminating the need for bulky floor furniture and creating a visually clean floating appearance to the supported equipment.

The newest additions to the line are offered in a reversible maple and rich espresso wood grain finish for multiple design options with a modern appeal. Both the solid espresso finish and sleek lines of the original Wall Cube and the new maple/espresso wood grain and softened curved front of the Reversible Wall Cube enhance the sophistication and warmth of any décor.

The Wall Cube's top shelf supports flat panel televisions or center channel speakers while the middle area is ideal for housing components and accessories. Reversible Wall Cube has Wire Wraps™ integrated wire management system to maintain cords neatly out of sight. Additional Wire Wraps can be purchased to extend the length as needed.

Available in two width sizes, the Single Wide Reversible Wall Cube supports up to 50 lbs per shelf while the Double Wide Reversible Wall Cube supports up to 100 lbs per shelf, both are offered in 6" high spacing. The original Wall Cube line in espresso finish is available in two width sizes. The Single Wide Wall Cube supports up to 75 lbs per shelf and is offered in 18", 9", 6" and 3" high spacing. The Double Wide Wall Cube supports up to 150 lbs per shelf and is available in 9", 6" and 4" high spacing. A combination of single and double wide shelves can be used together to create the desired spacing and support needed to accommodate components in a custom configuration.

The Wall Cube can be easily mounted into wood or metal studs, concrete or masonry and has a unique design which allows for horizontal adjustment between wall brackets to center on the wall.
